

7 year Warranty

Electroplated: Brass, Bronze & Copper

Stormtech offer a 7 year warranty on unlacquered aged finishes – bearing in mind that these finishes are designed to age naturally as real brass or copper will – tarnishing, dullening over time and gradually becoming darker where not handled, lightening where handled more and verdi gris where salts (from air, hands or products) are left to settle.

The base metal is recommended to be stainless or brass. If the base metal is mild steel or aluminium, the finish must be clearly specified & instructed on Purchase orders as “Duplex”. Note: some aluminium profiles may be exempt & unsuitable for warranty of plating.

Stormtech warrant the integrity of the electroplated layers of nickel and brass which are electro-chemically bonded to the stainless steel. Any bronze patina will be affected over time due to constant wear from hands. In high wear areas the patina will lighten slightly, and in areas which are untouched, the patina will dull somewhat. We do not warrant against mechanical damage. (This includes harsh abrasives, scotchbrite or similar products which should not be used). Should a claim arise within the warranty period, Stormtech would undertake to replate upon return to our premises.

Metallic Colour Variation

Please be informed that:

- Electroplating over stainless steel is a decorative finish.
- Electroplating with a metal such as copper, brass or bronze will coat the stainless steel with this metal. This coating will age or tarnish in the same way as a solid piece of this metal would do. This “living finish” will change over time and with use. This change is varied, and subject to local conditions as the coating reacts to its environment.
- The products are supplied in an ‘as new’ condition which is not intended to be the final finish.
- Colours selected can vary in hue, digital in printed images may vary from the finish supplied.
- Every effort is made to ensure the closest colour match, but cannot be guaranteed.
- Batches produced at different times will be slightly different.
- Stormtech cannot take any responsibility for variation in colour with the ageing process.
- NOT RECOMMENDED FOR EXTERNAL USE

If you are purchasing one of our metallic products, please indicate below your acceptance that you are aware of the above mentioned points.
